Summary

Aspiring Software Engineer with strong knowledge of programming fundamentals and a keen interest in building scalable and efficient software solutions. Skilled in problem-solving, data structures, AI tools to build software and find bugs, and algorithms. A quick learner and team player with leadership qualities, passionate about exploring new technologies and contributing to impactful projects.

Education

- Vellore Institute of Technology Vellore, India
Master of Computer Application; CGPA: 8.60* July 2025 - Present
- Vellore Institute of Technology Vellore, India
Bachelor of Computer Science; CGPA: 8.90 July 2022 - May 2025

Projects

- **Pandora – Skincare Product Recommendation Web Application:** Developed a web-based application that suggests suitable skincare products based on users' specific skin concerns. The system collects user inputs about their skin problems and provides relevant product recommendations accordingly. Implemented a responsive frontend and connected it to a SQL database through server-side scripting.
Tech used: HTML, CSS, JavaScript, PHP, MySQL.
- **HireLink Pro – Microservices-Based Job Portal:** Developed a web-based job portal that allows users to register, search jobs, and apply for positions, while recruiters can post and manage job listings. Built using a microservices architecture with separate services for users, jobs, and applications. Implemented REST APIs, JWT authentication, and inter-service communication using Axios. Used event-driven architecture and in-memory caching to improve performance and ensure efficient data handling.
Tech used: MongoDB, Express.js, React.js, Node.js, Docker
- **Railway Track Crack Detection System – IoT-Based Safety Monitoring System:** Developed an IoT-based system to detect cracks in railway tracks using sensors and microcontroller technology. Integrated IR sensors to monitor track conditions, with signals processed by an **Arduino Uno** microcontroller (programmed using Embedded C via the Arduino IDE). A motor mechanism enabled movement along the track for real-time monitoring. Upon detecting cracks, the system sends alert messages to the administrator using a GSM module.
Tech used: Arduino Uno, Embedded C, IR Sensor, GSM Module, DC Motor, IoT.

Skills

- **Programming Languages:** C, C++, Java, Python(Basics)
- **Databases:** MySQL, MongoDB
- **Web Technologies:** HTML, CSS, JavaScript, React, Node, Express
- **Tools & Concepts:** SDLC, IOT development, AI-assisted development & debugging
